

BYPASS AHEAD

**PROTEIN THAT BYPASSES THE
RUMEN AND IMPROVES FEED
EFFICIENCY AND MILK PRODUCTION**

Make sure all the
bypass protein you
feed actually helps
produce more milk.

There's more to improved performance from your dairy cows than simply getting additional protein through the rumen to the small intestine. Your cows must also be able to digest it and utilize the essential amino acids to increase milk production.

Soy Pass® from LignoTech not only delivers more non-degradable protein to the small intestine than any other bypass protein product, it's also more digestible. The patented manufacturing technology used to produce Soy Pass ensures that proteins are undamaged and available to the animal.

Talk with your nutritionist or feed supplier about the added value of more balanced and available amino acids in your cows' diets. Then ask for Soy Pass.

SOY PASS®

The Bottom-Line Advantage.
